

SLEEK LAPTOP MOCKUP

PIXEL-PERFECT MOCKUP FOR WEB AND PRINT

Thank you for purchasing this item!

This download contains 6 PSD-files, one for each screen resolution. All of the psd-files do look the same inside and all contain the 8 different views that are included (6 open and 2 closed).

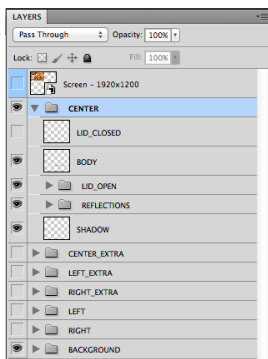

Choose the screen resolution that fits your needs and open the PSD-file.

The first layer is the screen smart-object, the next 6 layers are the different views and the last layer is the background.

To edit the screen-background right click the first layer and choose “Edit Contents”, this will open up the smart-object in a new tab.

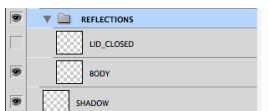

The easiest way to get your background in is to go to FILE -> PLACE and select the image you want. When done save and close the smart-object.

Next step is to choose the view you want, in this case we select the CENTER-view.

Now you can select if you want the shadow and reflection to be visible, just click the eye on the layer to hide the effect you do not want.

In both the CENTER and CENTER_EXTRA view you can select to have the lid-closed on the laptop. To “close” the lid select the LID_CLOSED and unslect teh LID_OPEN. To make the reflection match up with the lid closed open up the folder REFLECTIONS.

To make the lid visible in the reflection just select the LID_CLOSED layer. Don't forget to change back if you want an image with the lid opened.

If you have any questions don't hesitate to contact me, the easiest way is through the contact-form on my Grapic-River profile page.

These files included in this purchased item can not be sold separately, not make copies and distribute them.
